

# Epsilon Data Connect

**Epsilon Connect**  
The Global Carrier Meet-Me-Room

## Reliable Carrier to Carrier Connectivity

Epsilon Connect is the largest Global 'Meet-Me-Room' for Voice and Data Connectivity, linking the major regional Telecom Hubs around the World. Epsilon's reach extends to almost 50 Telehouses, enabling access to approximately 1000 Operators and Service Providers, 250 of which are already pre-connected to the network. Once pre-connected, customers can enjoy the benefits provided by the largest global 'Meet-Me-Room', Epsilon Connect.

Epsilon's underlying multivendor infrastructure offers resilient services over its DWDM, SDH and Ethernet backbone which connects all its Points of Presence. At the

core locations, large Multi Services optical switches have been deployed to provide mesh restoration mechanisms for increased network resilience and diversity options.

The MPLS-IP VPN network is built on Core Routing Technology and provides seamless IP connectivity between all POP's and bridges regional and national MPLS networks globally.

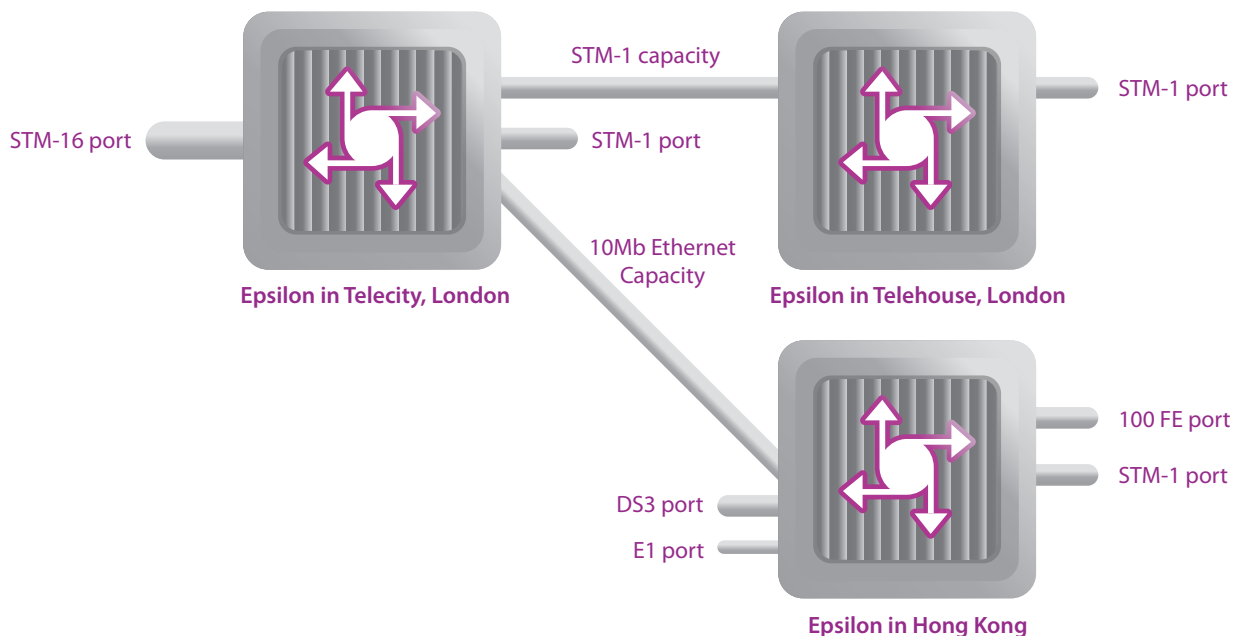

Epsilon Data Connect can also operate as "your virtual PoP" by simply leasing ports on any of our nodes across the entire network. With this setup customers can have a low cost fully managed presence and choose any other network provider for capacity extensions to

other locations. Epsilon Network supports the full range of TDM and Ethernet ports to allow for full flexibility across the Global footprint.

Services are delivered by Epsilon's dedicated Carrier Services Team. This Team manages the order and delivery process throughout to warrant a timely and smooth handover of services.

Epsilon operates a strict "no competition" policy with its Carrier Customers which guarantees integrity, confidentiality and avoids difficult channel conflicts.
